About IEAT: The trust aims to investigate and innovate on economic issues, and such related developmental paradigm of Uttar Pradesh and Indian economy in general, and direct and indirect linkages with emerging and advanced economies in particular. Advancing academic endeavors in economics and related disciplines such as commerce and management by encouraging high standard academic research and intellectual engagement among the stakeholders from academia industry, policy think tank, and government. To facilitate communication among academicians through meetings, seminars, conferences, workshops, courses, and setting up of research and teaching institute/University through offline and online or hybrid mode. To promote publications, indexations and citations through journals, edited books, reports etc. The objectives of IEA Trust will be to promote learning and research in theoretical economics, empirical economics, business economics, development economics, and allied areas of socioeconomic fabric. The objective is sought to be achieved by: Undertaking, organizing, coordinating, and maintaining research library and documentation centre. Holding annual conference and research courses periodically. Publishing books, journals, policy papers, reports, research papers, news letter or summaries of papers separately or collectively, or in a periodical which may be issued under the auspices of IEAT.

The IEAT publishing its journal named Indian Journal of Economic Perspectives. For details visit the website (https://ieatrust.in/).

Conference Background:

As India has completed 75 years of independence, it must be both desirable and vital for an academic call to enquire into an issue so pressing for a nation with great diversity in almost all aspect of human endeavors broadly social, economic, and cultural and that can be termed as the issue of redistribution along the trajectory of GDP/ GSDP. The very scene evident in this scenario gives a timeline wherein pre-independence period is characterized by low to moderate growth accompanied with a relatively low to moderate level of income inequality not necessarily in a parallel manner whereas in the post-reform period the story is completely reversed both in the case of growth rate of GDP and the level of income inequality in the economy. The conference poses questions to the academia to look into various dimensions of the phenomenon. The complex issue is both an outcome of technological as well as socioeconomic factors. The experts are expected to explore ways and means for explaining various dimensions affecting the interrelationship between growth and redistribution. The growth strategy during the pre-reform period was pre-dominantly a planned exercise that had identified agriculture and industry as primemoving forces specifically during the early decades after the independence. Growth in the post-reform period is heavily skewed towards services sector that has effectively been utilizing modern technology and foreign capital. Hence the pertinent question to be addressed is to whether the story of income inequality vis-à-vis growth in Indian economy during the 75 year period is an outcome of institutional factors or technical one. In monetary sector RBI is very flexible. Indian currency has been decline value in dollar terms. Demonetization has taken to reduce money supply.

New tax regime as GST has been introduced. Many other govt programmes for skilling and start ups have taken place. Welfare measures have also According to World Bank report a 10% increase in mobile and broadband penetration increases per capita GDP by 0.81% and 1.31% respectively in developing countries. So, it can play a key role in GDP growth. The concept of e-society emerged in the 1970s and by 1990's the term got popular. In an information society, the quality of life and prospects for change in social and economic development depends upon information and its exploitation. The change in the social structure has affected on the values, customs and economic activities of the society and people are facing new challenges in everyday life than ever before. ICT have revolutionized in the education field and has introduced new dimensions through e-learning, m-learning and u-learning. In medical field, IT is used for multipurpose tasks such as diagnosing the disease, capture and transmits photographs of

internal problems such as blood clots and tumors that previously can be seen only during exploratory surgery, monitoring patients at their bedside and controlling the movement of robotic surgical assistants. The transfer of money and paying of bills through e-banking, use of ATM machine to withdraw and transfer of money through online has changed the life style of people. Online shopping, e-tickets for travelling are done through internet.

With the above background this conference will provide an ideal platform where the experiences and thoughts can be shared and assimilated to come up with a unified understanding of trend and distribution and their impact on the society and the economy.

Tracksand sub-themes:

Track 1: Macroeconomic Development

- Structural changes in Indian Economy
